

Installation Instructions

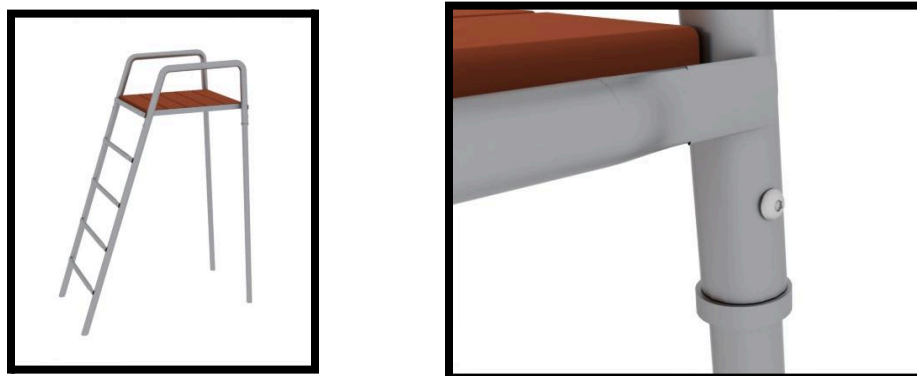

Freestanding Slide

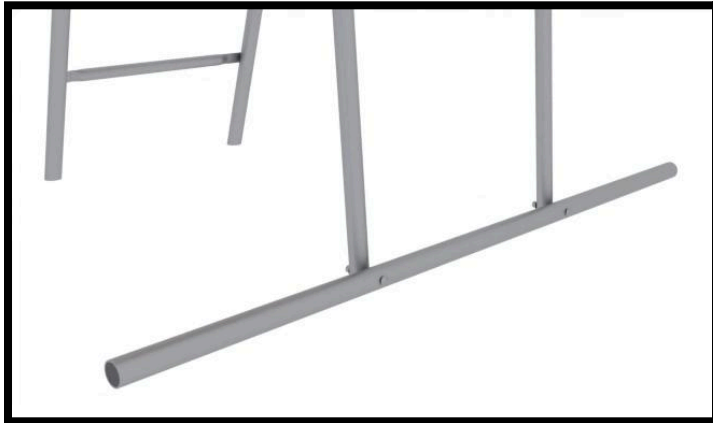

1. Insert ladder piece into landing platform assembly, making sure to insert it on the angled side of the platform, and having the rungs face away from the platform. Secure using two $\frac{3}{4}$ " BHS bolts and the provided allen wrench.

2. Stand the platform up and insert the two front legs and secure with the other two $\frac{3}{4}$ " BHS bolts. Ensure that the legs are on the more vertical side of the platform. If the holes don't line up, switch the positions of the two legs.

3. Attach the spreader bar to the bottom of the two legs and secure with two 4" carriage bolts, two washers, two lock washers, and two hex nuts, in that order.

4. Finally, place the slide on the edge of the landing platform, ensure it is straight, and secure using two #14 x 1- $\frac{3}{4}$ " Truss Screws with two 5/16" washers. The screws should go down through the slide into the plastic lumber.
